

Towards Modelling Systems of Cyber-Physical Systems

Martin Mansfield

John Fitzgerald

Newcastle
University

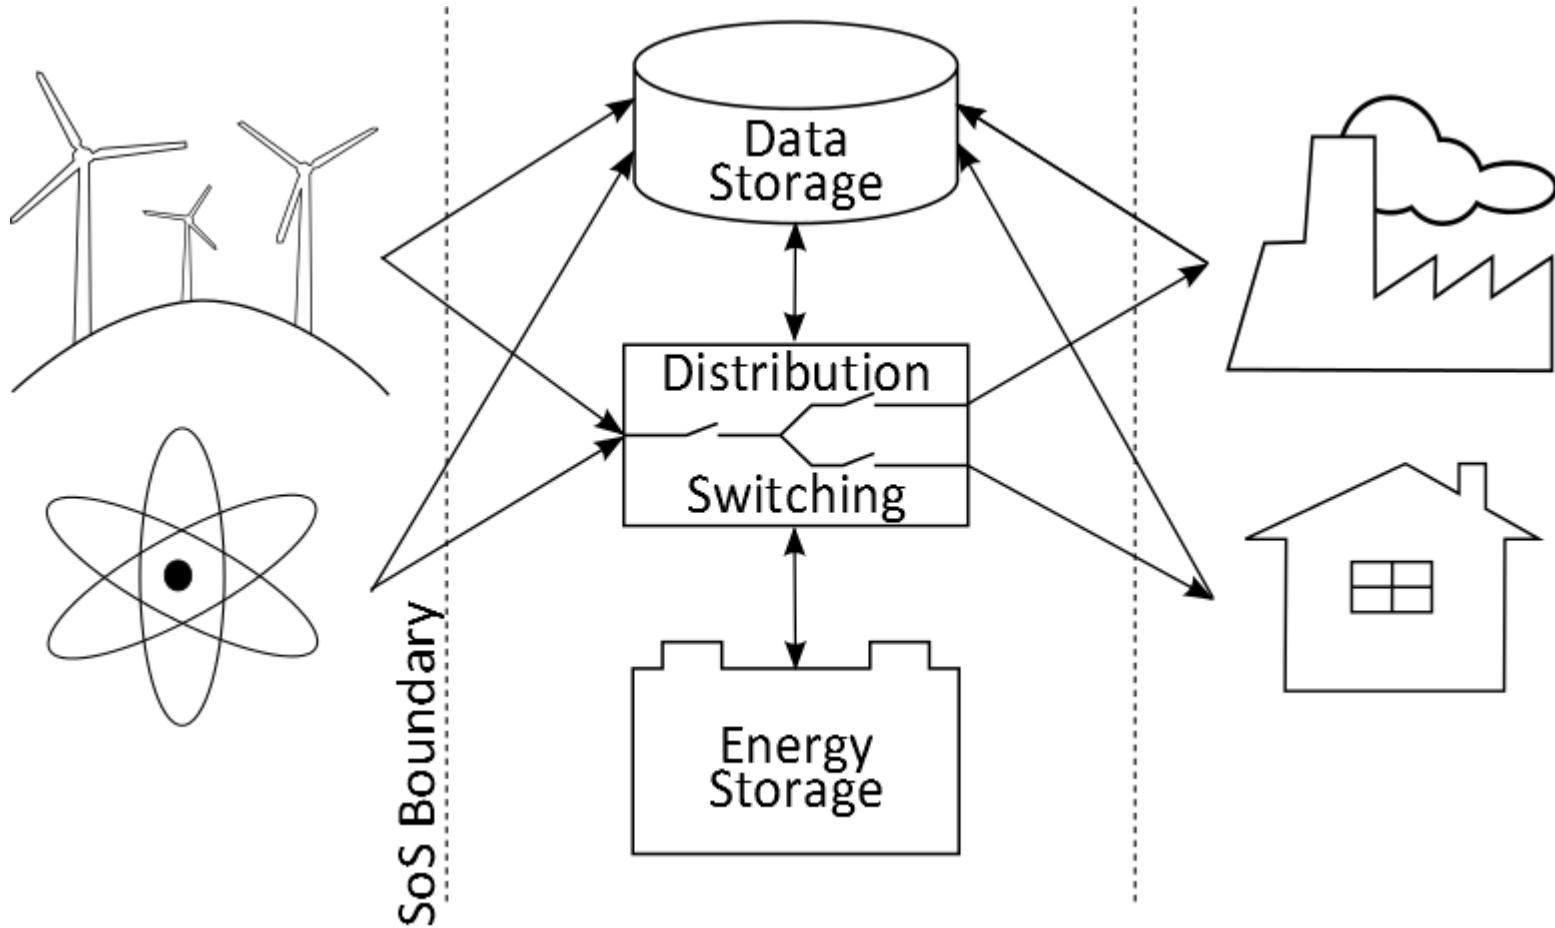

Background

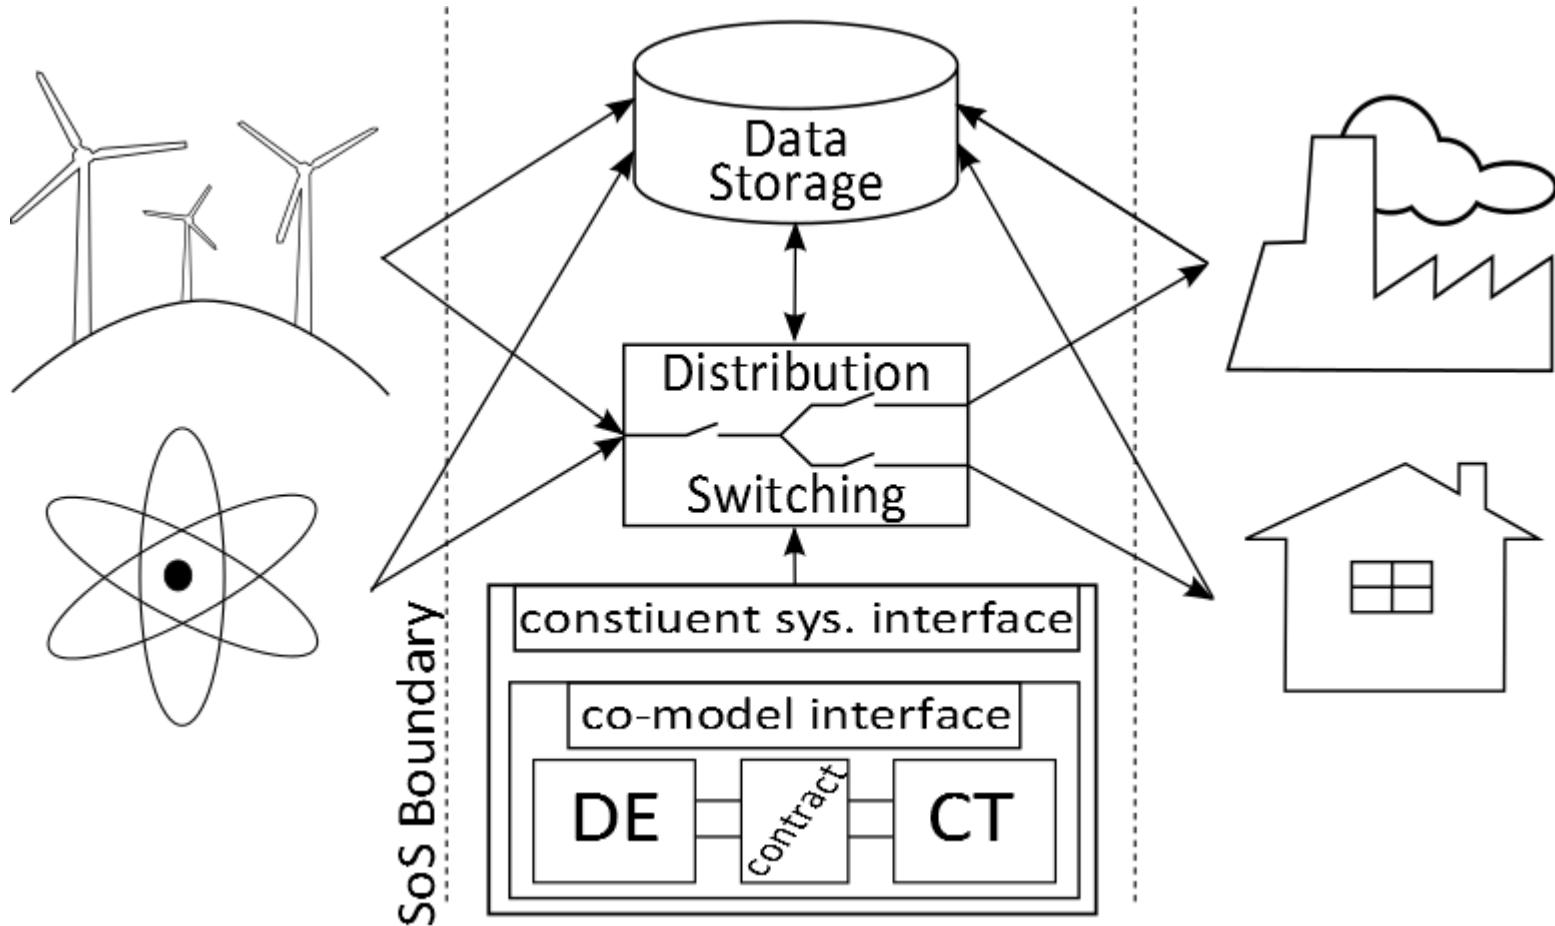

C O M P A S S

Motivational Example: Smart Grid

Motivational Example: Smart Grid

Combining Technologies

CML

```
process Hydroplant
```

```
types
```

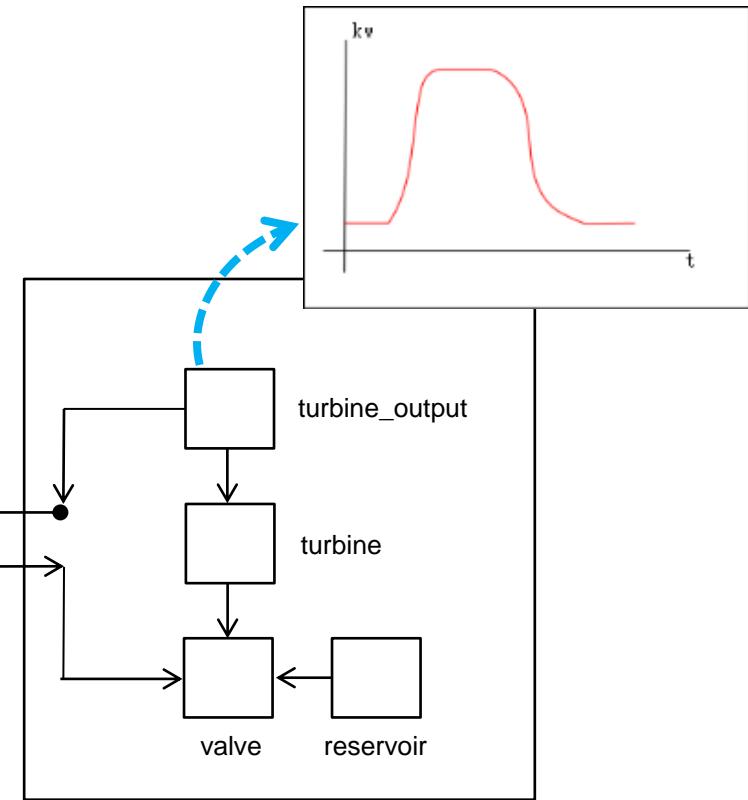

```
Mode = <OFF> | <STANDBY> |  
<STARTING> |  
<GENERATING> |  
<SHUTDOWN>
```

```
State
```

```
currOutput : real -- {kW} -->  
currMode : Mode
```

```
...
```

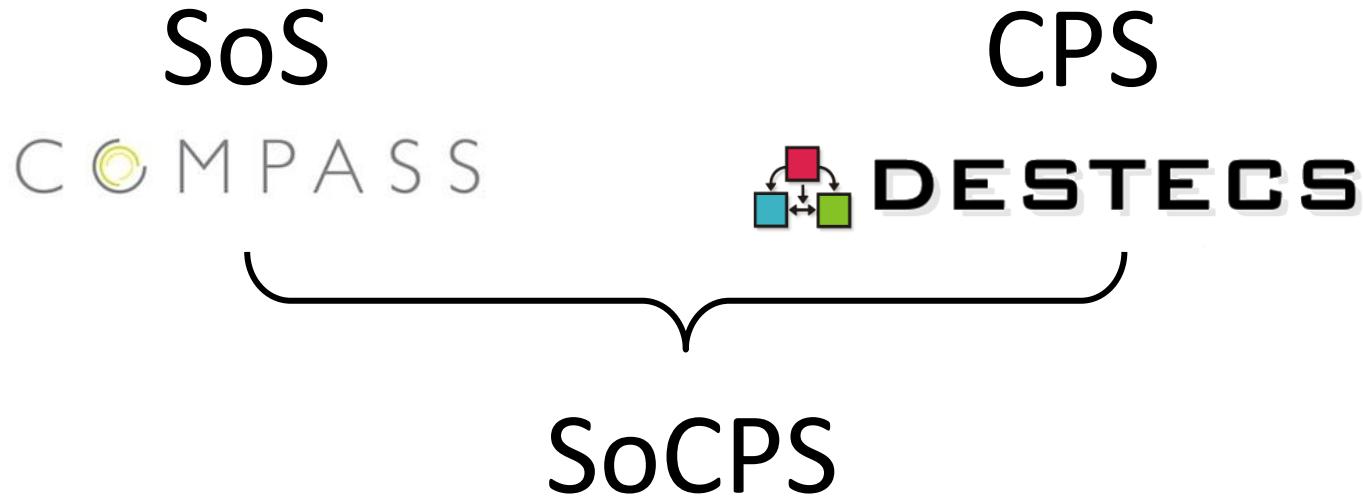

CT Model (e.g. 20-sim)

Verification Advantages

- Why bother?
- Combination of properties that influenced
DESTECS and COMPASS

Modelling SoCPS

- Extend CML syntax
- Combine semantic definitions
- Create patterns for creation & use

...
