

Integrated Tool Chain for Model-Based Design of Cyber-Physical Systems

Professor Peter Gorm Larsen

Department of Engineering, Aarhus University

Linköping University

INTO-CPS Objectives

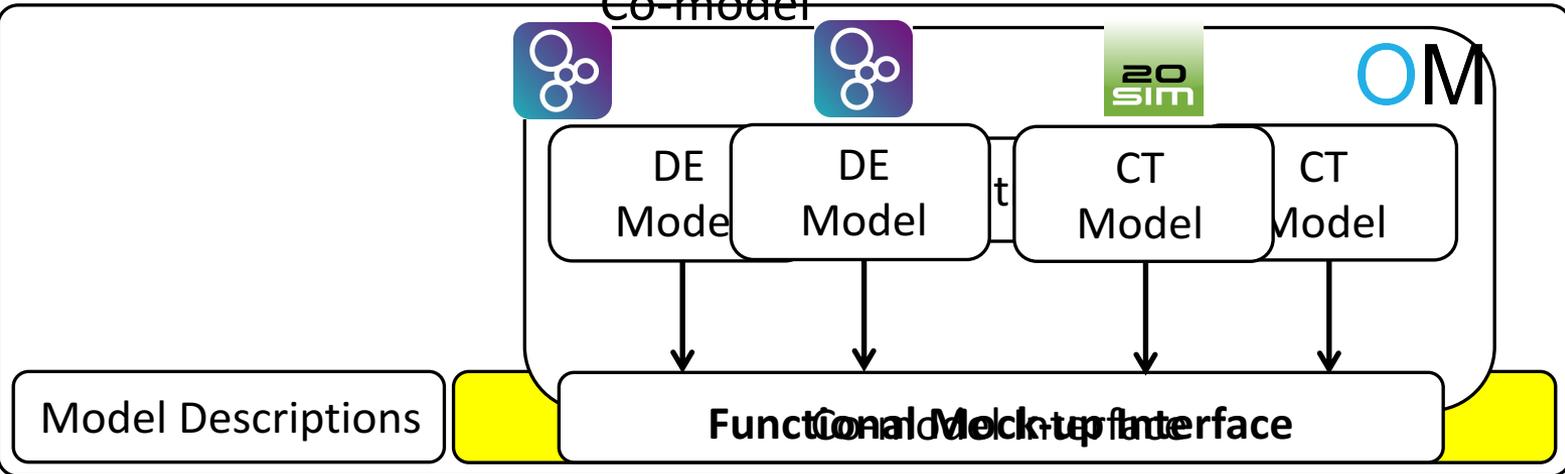

1. Build an open, well-founded tool chain for multidisciplinary model-based design of CPS that covers the full development life cycle of CPS
2. Provide a sound semantic basis for the tool chain
3. Provide practical methods in the form of guidelines and patterns that support the tool chain
4. Demonstrate in an industrial setting the effectiveness of the methods and tools in a variety of application domains
5. Form an INTO-CPS Association to ensure that project results extend beyond the life of the project

Outline Work Flow

Requirements Engineering

● Entry point 1

Construct SysML
Architecture

Develop Simulation
Models

Create FMUs

● Entry point 2

Select Library FMUs

Connect Multi-model

Simulation (single / DSE)

Model Checking

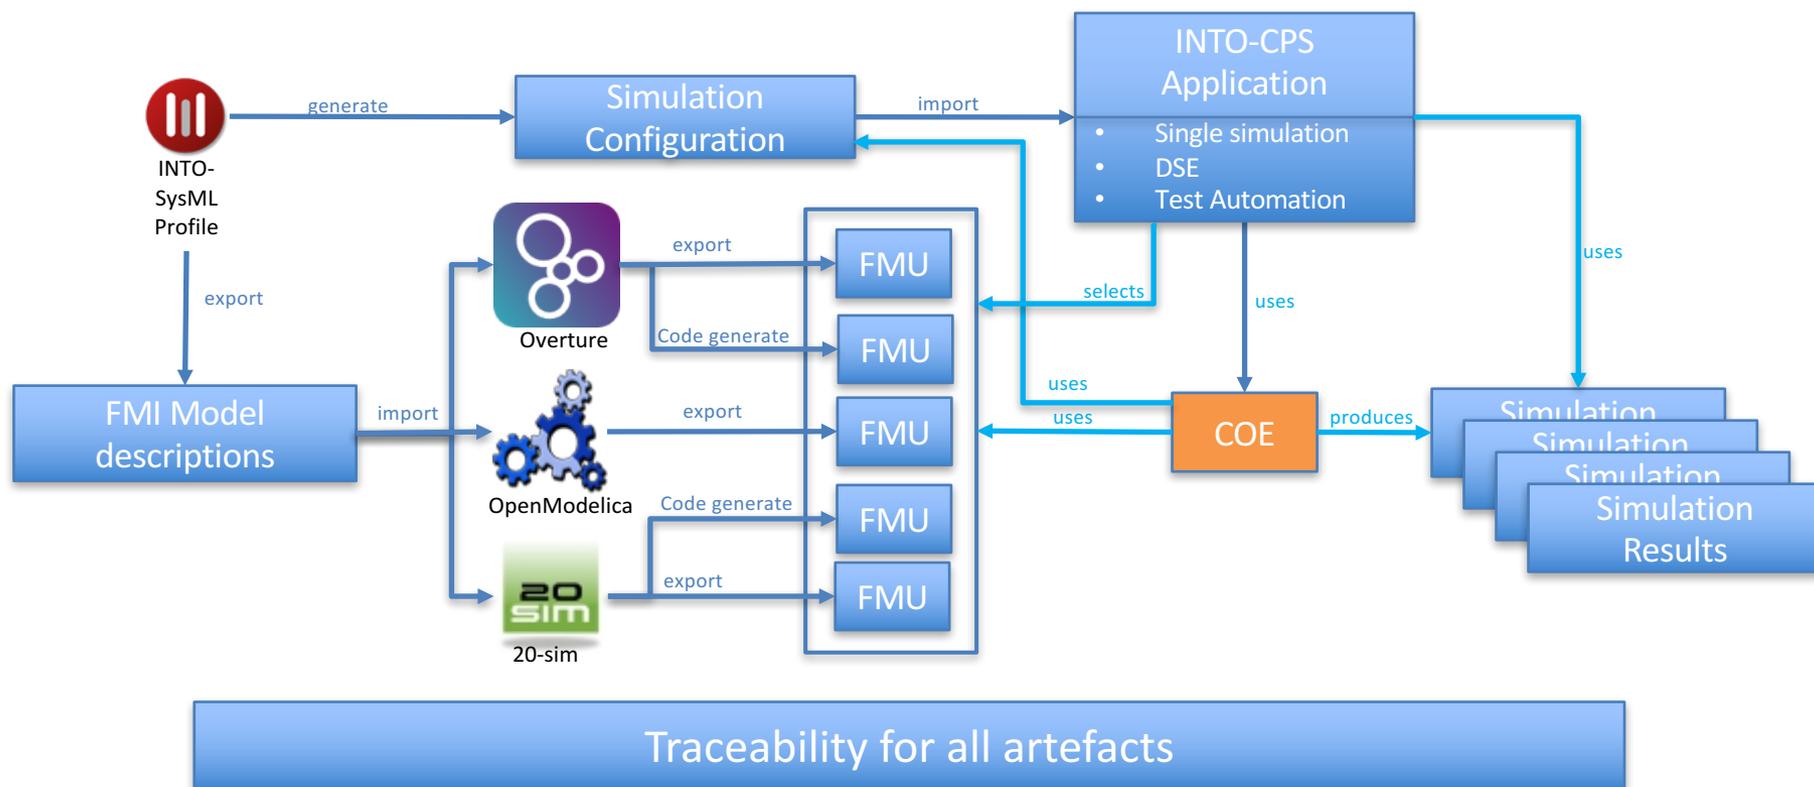

Hardware/Software
in the loop

Results

The INTO-CPS Tool Chain

The Co-simulation Engine

- Fully FMI 2.0 compliant Master Algorithm → any FMU model can be connected
- Support for discrete event (DE) and continuous time (CT) models, using proposed FMI extensions
- Multi-platform, 32/64 bit (Java-based)   
- Parallelization (using Akka / Scala) under investigation
- GUI prototype based on Modelio

DSES

- + lfr-125controllerValues
- + lfr-16sensorPositions
- + lfr-216controllerValues
- + lfr-2sensorPositions
- + lfr-8controllerValues

FMUS

- 3DanimationFMU
- Body_Block
- LFRController
- Sensor_Block_01
- Sensor_Block_02
- Sensor_Block

MODELS

- + LFRController
- R2G2P_Body_Only
- R2G2P_Single_Sensor
- textures

MULTI-MODELS

- + lfr-3d
- + lfr-3d-rep
- + lfr-non3d
- + lfr-non3d-rep

RESOURCES

SYXML

- + LineFollowRobot_Non_Re
- + LineFollowRobot_Replicat

INTO-CPS > welcome

Welcome to the INTO-CPS Application

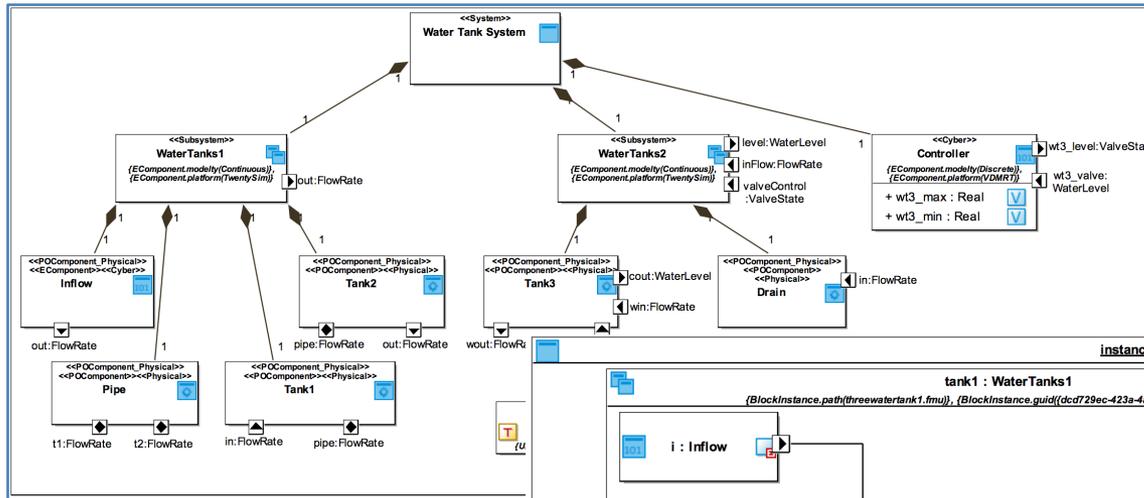

Co-Simulation Foundations

- Initial foundations developed for
 - SysML
 - VDM-RT
 - Modelica
 - FMI
- SysML CPS profile defined
 - Architecture Structure Diagram
 - Connections Diagram
 - Visualisation Diagram (TBD)
 - System Under Test Diagram (TBD)

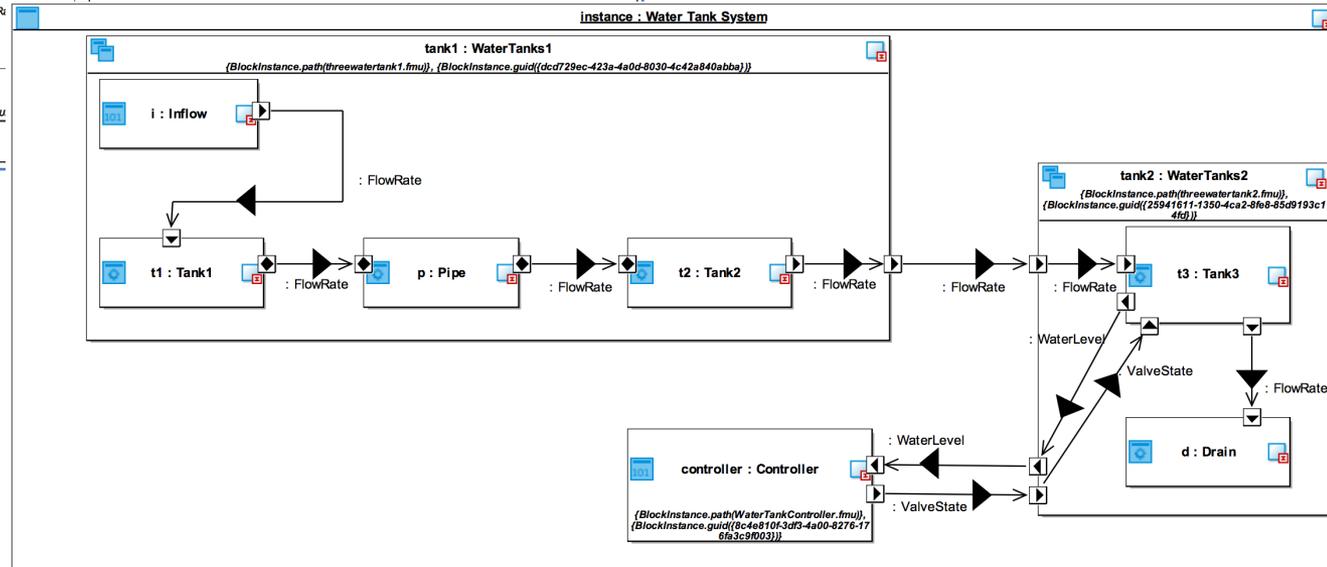

INTO-CPS SysML CPS Profile

- Three-tank Water Tank : INTO-CPS technology
 - Design architecture using INTO-CPS profile

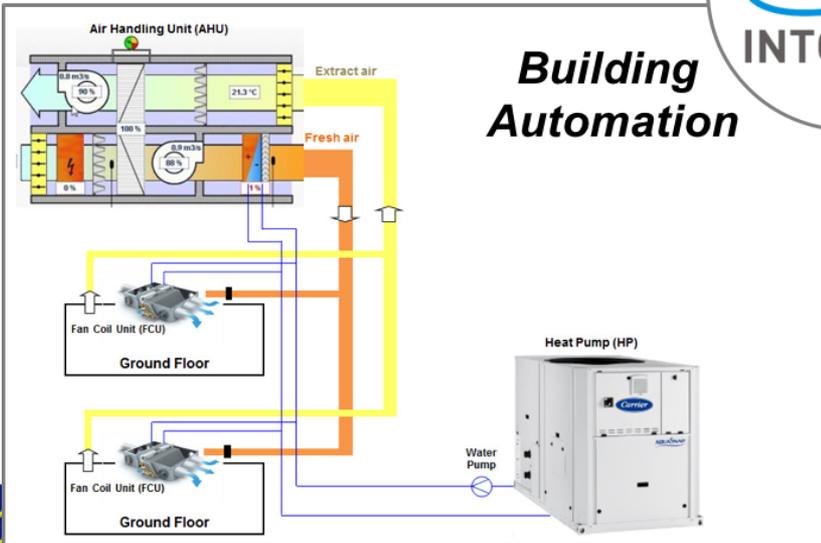

Architecture Diagram showing the components between the different subsystems according to their inter-FA models in the multi-model

Design Space Exploration

How to Explore?

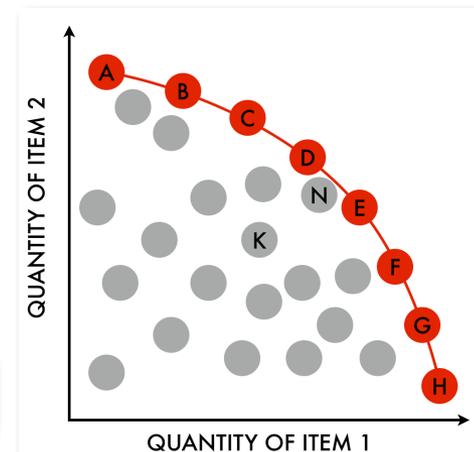

How to Assess?

$$V_a = w_1^a v_1^a(x_1^a) + w_2^a v_2^a(x_2^a) + \dots + w_n^a v_n^a(x_n^a)$$

- Exhaustive
- Taguchi Methods
- Space Culling
- Genetic Methods

DSE Driver

Simulation parameters, control of process

Objective Evaluator

Objective measures and constraint satisfaction from raw simulation results

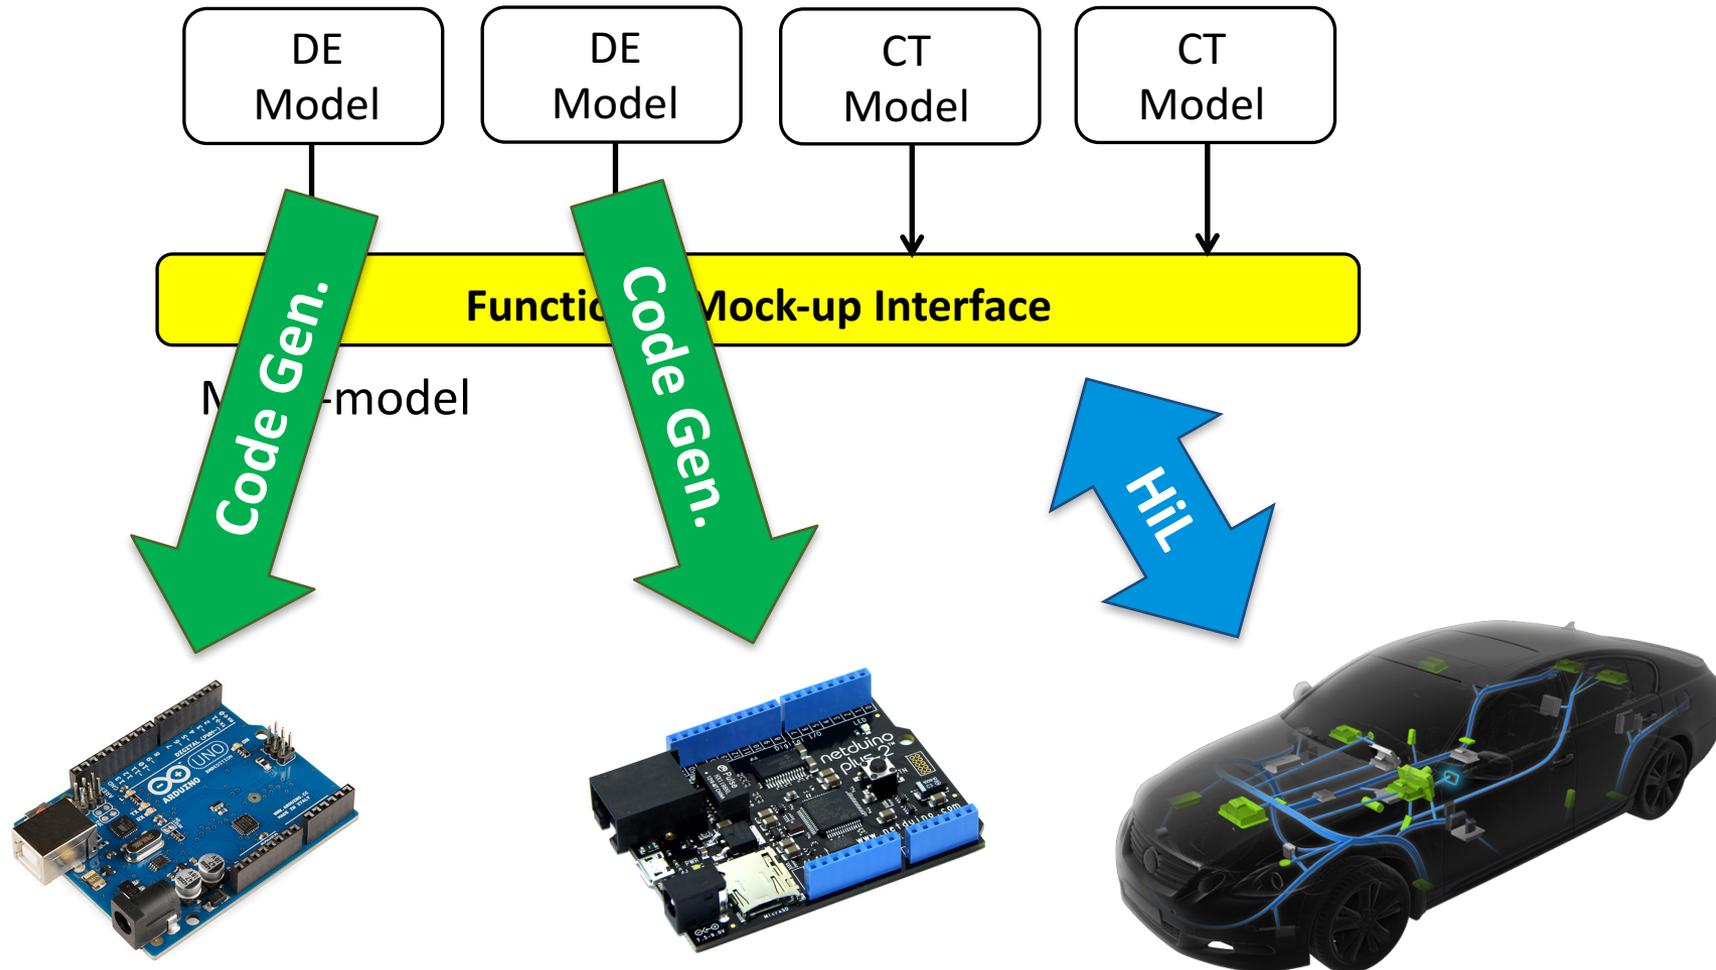

Ranking

Ranking designs according to objective values

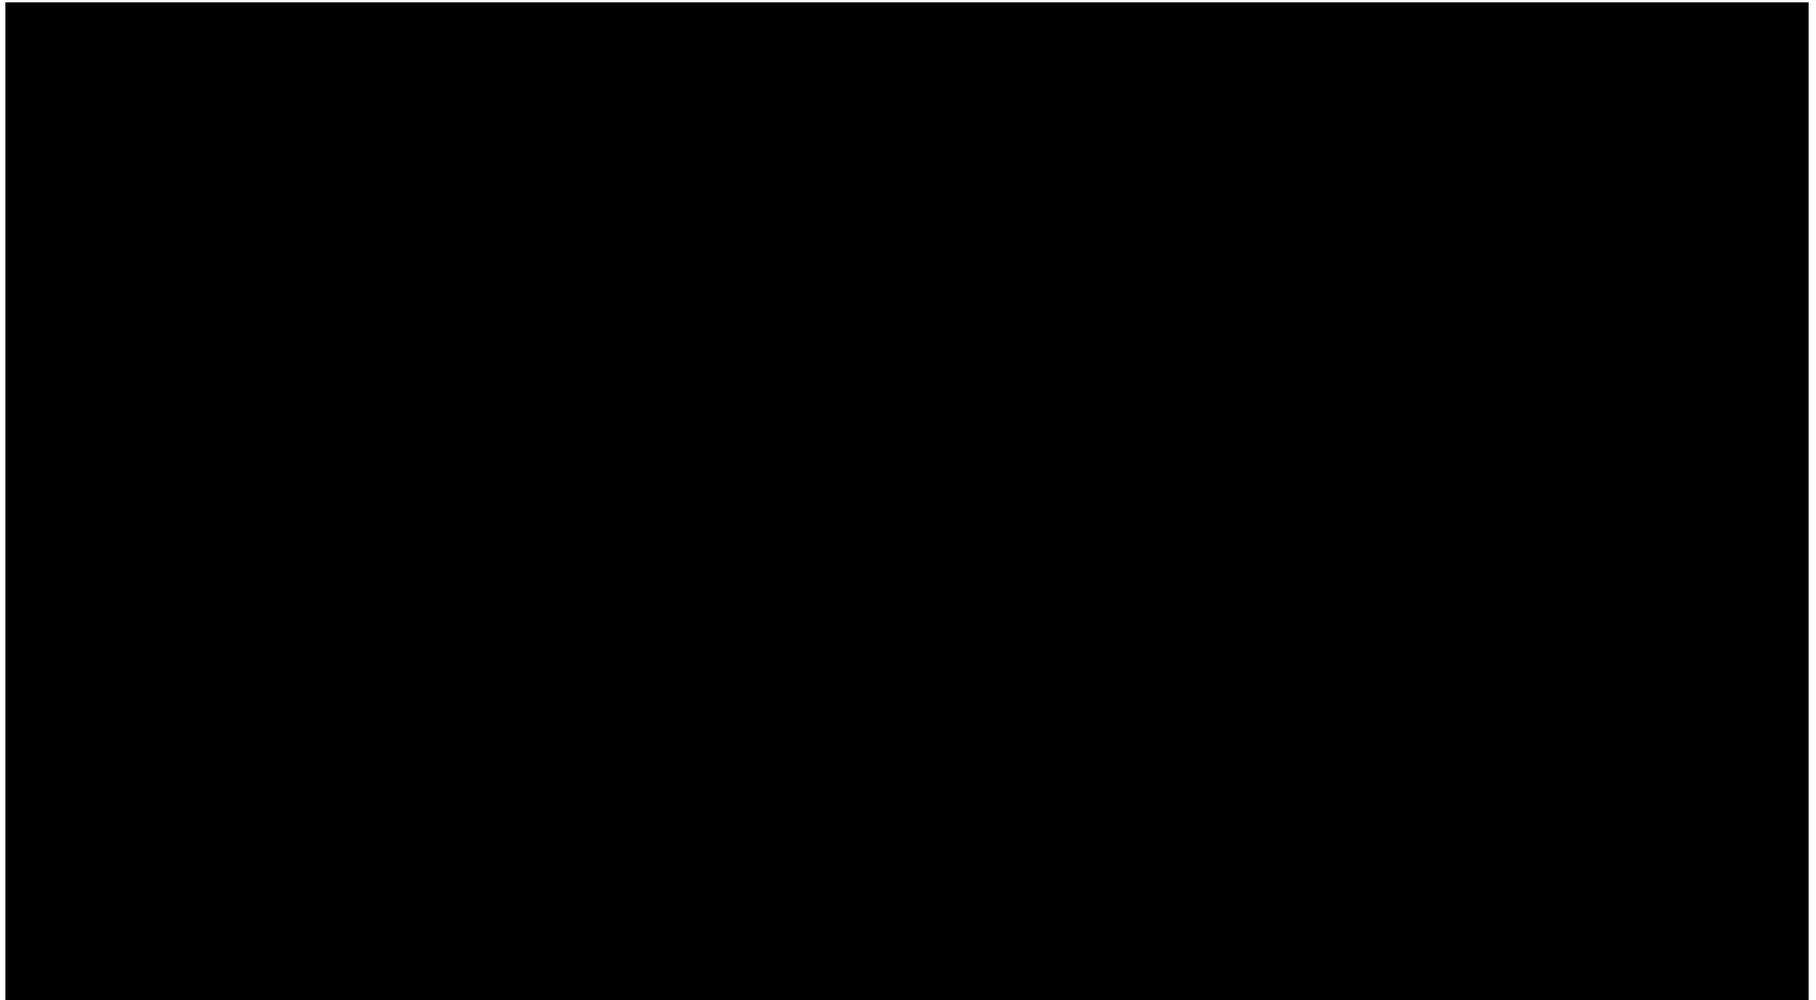

Presentation

Display of results and search progress to the user

Hardware-in-the-Loop (HiL) and Code Generation

Using Generated C Code Embedded

Test Automation

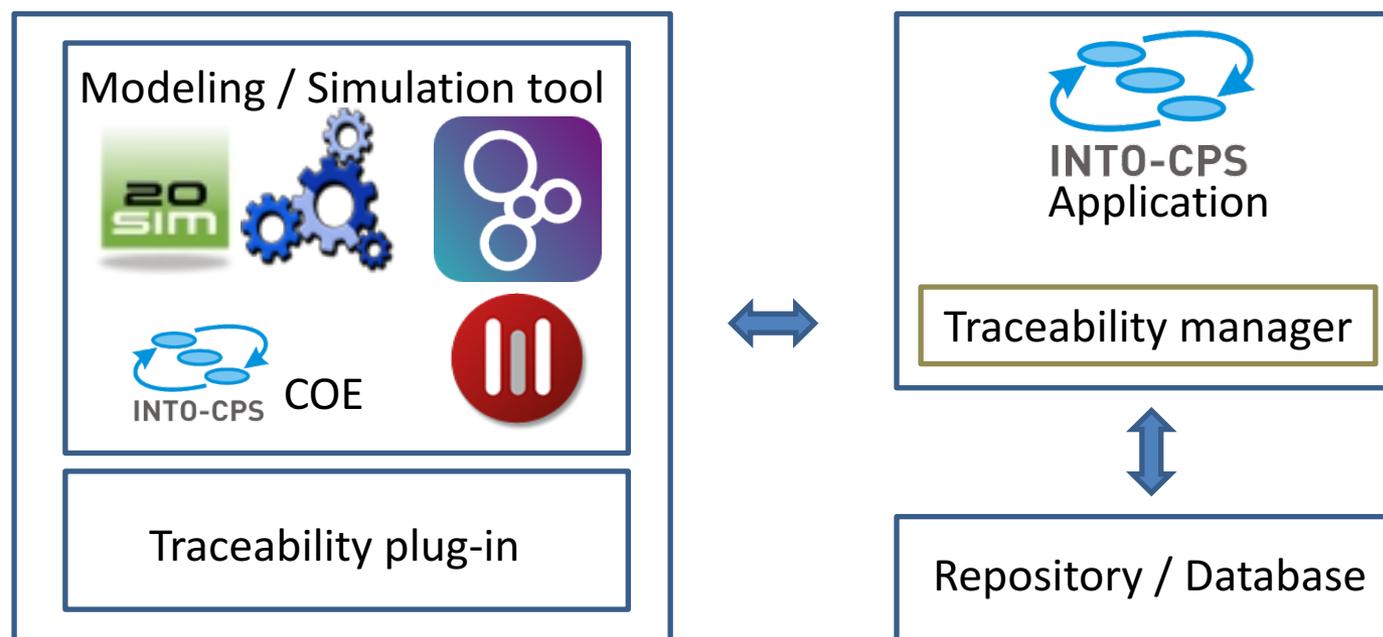

- Based on RT Tester tool suite
- Status:
 - Test sets generated from XMI import (from Modelio)
 - Test procedures are generated as FMUs, connected to Co-simulation
- Outlook:
 - Identify SuT in SysML profile, connect to Test Automation
 - Connect SysML requirements with LTL formulas

1 Test Procedure			2 Test Case			3 Requirement		
Filter Options								
Name: <input type="text" value="string or /regexp/"/>			Verdict: <input type="text" value="Any"/>			Status: <input type="text" value="Any"/>

TC-TURN_INDICATION-MCDC-0003	PASS (M)	IN WORK						
TC-TURN_INDICATION-MCDC-0004	PASS (M)	IN WORK						

Traceability & Provenance

- Goal: Ensure tracing between requirements, models, results, code
- Keep track of changes
- Will use OSLC / Prov-N standards

Any questions?
